

TimeTracker

CAD Drawing
Accounting/Auditing

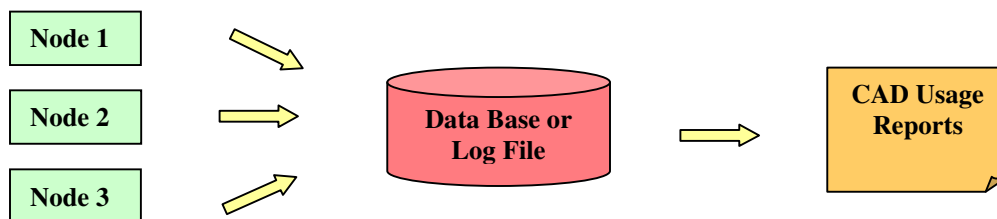

Description

TimeTracker is a product designed for service-oriented firms who need an **easy, accurate** and **cost effective** way to track usage of CAD drawings.

Simple Time Accounting – Tracks time spent in CAD drawings by user, workstation, date/time in and out, elapsed time and optional user defined Project/Task ID codes

Optional Project/Task ID Coding – Option of manual prompt or automotive lookup for selection of a Project and Task ID to code with time/activity upon entering a drawing

Centralized Network Support – all workstations on the network write to a single common log file

Inactivity Time Support – Does not report time spent in a file after a user-specified inactivity period

Multiple Session Support – Properly accounts for multiple MicroStation™ sessions

Database Ready Log File – Writes to database (Access, SQL Server, Oracle, etc.) or ASCII file
– CSV Format output file is ready to import

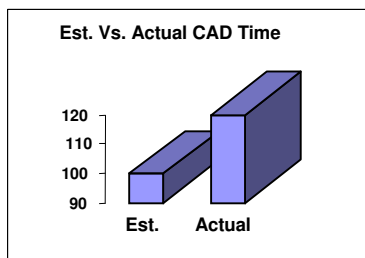

Auto-Log Creation – Option to auto name and create and name output logfiles based on a user selectable time interval such as by year, month (i.e., April-2005.csv for April 2005), week within year, day or hour

100% Transparent – **TimeTracker** (tt.ma) can be configured to automatically run at MicroStation startup as a Design Application (MS_DGNAPPS)

Secure – Once loaded, **TimeTracker** cannot be manually unloaded

Project/ID
Project: 22736
ID: 600-89
OK

User Definable
Project/Task ID
Coding prompt
(optional)

What Can TimeTracker Do for Me?

- √ Compare *Actual* CAD Time vs. *Estimated*
- √ Use for future labor forecasting based on past history
- √ Report on CAD Editing time by Project/Task id, drawing, person, total editing time
- √ Determine which drawings were used, by whom, when

**FREE
30 Day
Eval**

Platform Support
MicroStation V8.x, V7, SE
XP, 2000, NT 4.0, ME, 98
